## Question 1

Correct

Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
Factor(num) {
{
    for (i = 1; i <= num; ++i)
    {
        if (num % i == 0)
        {
            printf("%d ", i);
        }
    }
}
```

**Note:** No need of counter increment for declarations and scanf() and counter variable printf() statement.

**Input:**

A positive Integer n

**Output:**

Print the value of the counter variable

**Answer:**

```
1 #include <stdio.h>
2 int Factor(int num){
3     int c=0;
4     for (int i = 1; i <= num; ++i){
5         c++;
6         if (num % i == 0){
7             //printf("%d ", i);
8             c++;
9         }
10        c++;
11    }
12    c++;
13    return c++;
14 }
15 int main(){
16     int num;
17     scanf("%d",&num);
18     printf("%d",Factor(num));
19 }
```

	Input	Expected	Got	
✓	12	31	31	✓
✓	25	54	54	✓
✓	4	12	12	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
